

Repeater Based Solutions:

Repeaters give an optimal solution in mobile communication by covering areas that can't be covered well by base stations.

Kavveri's band selective repeater is an ideal solution for operators.

Kavveri Repeater Solutions provide both micro and macro coverage.

Repeater Solutions are also ideal for phase in deployments where cost, quality and coverage enhancement and optimization are key essential factors.

Outdoor Repeater Solution can be deployed as network extension in areas with no or weak signals such as Rural areas, Highways, suburbs etc.

They can also be used as an efficient and low-cost alternative to base stations where coverage is more critical than additional capacity.
